EZULWINI

CAPITAL RAISE · FULL EXPANSION · NOVEMBER 2026

Systematized farming. Local ownership

Ezulwini is developing a **full operating system** enabling **first-generation farmers** to enter agriculture at commercially viable levels from Day 1, in a network of jointly owned and run controlled-environment farm.

R20m	**13%**	**30 Nov 2026**
Debt and equity	Fixed coupon	First close

OUR WHY

Commercial farming in South Africa is still owned by very few

5 to 10%

Black farmers' share of commercial agricultural production

New entrants lack a route in. Skills and scale stay with established farms.

Ownership is concentrated. Food supply rests on a few large producers.

Methods cost too much. Open-field farming depends on water, imported inputs and weather.

Wandile Sihlobo and Mzukisi Qobo, Addressing Constraints to South Africa's Agriculture Inclusiveness.

WHAT HOLDS NEW FARMERS BACK

Four barriers between a new farmer and a commercial farm

Capital is out of reach

Lenders want collateral and a credit history new farmers do not have yet.

No reliable route to market

Small volumes mean weak prices and no way in to premium buyers.

No systems to run on

Without data or management tools, small farms run on guesswork.

Income comes in seasons

Open-field harvests arrive in cycles, so cash swings through the year.

OUR ANSWER

We build the farm, then one app and one support team run every farm

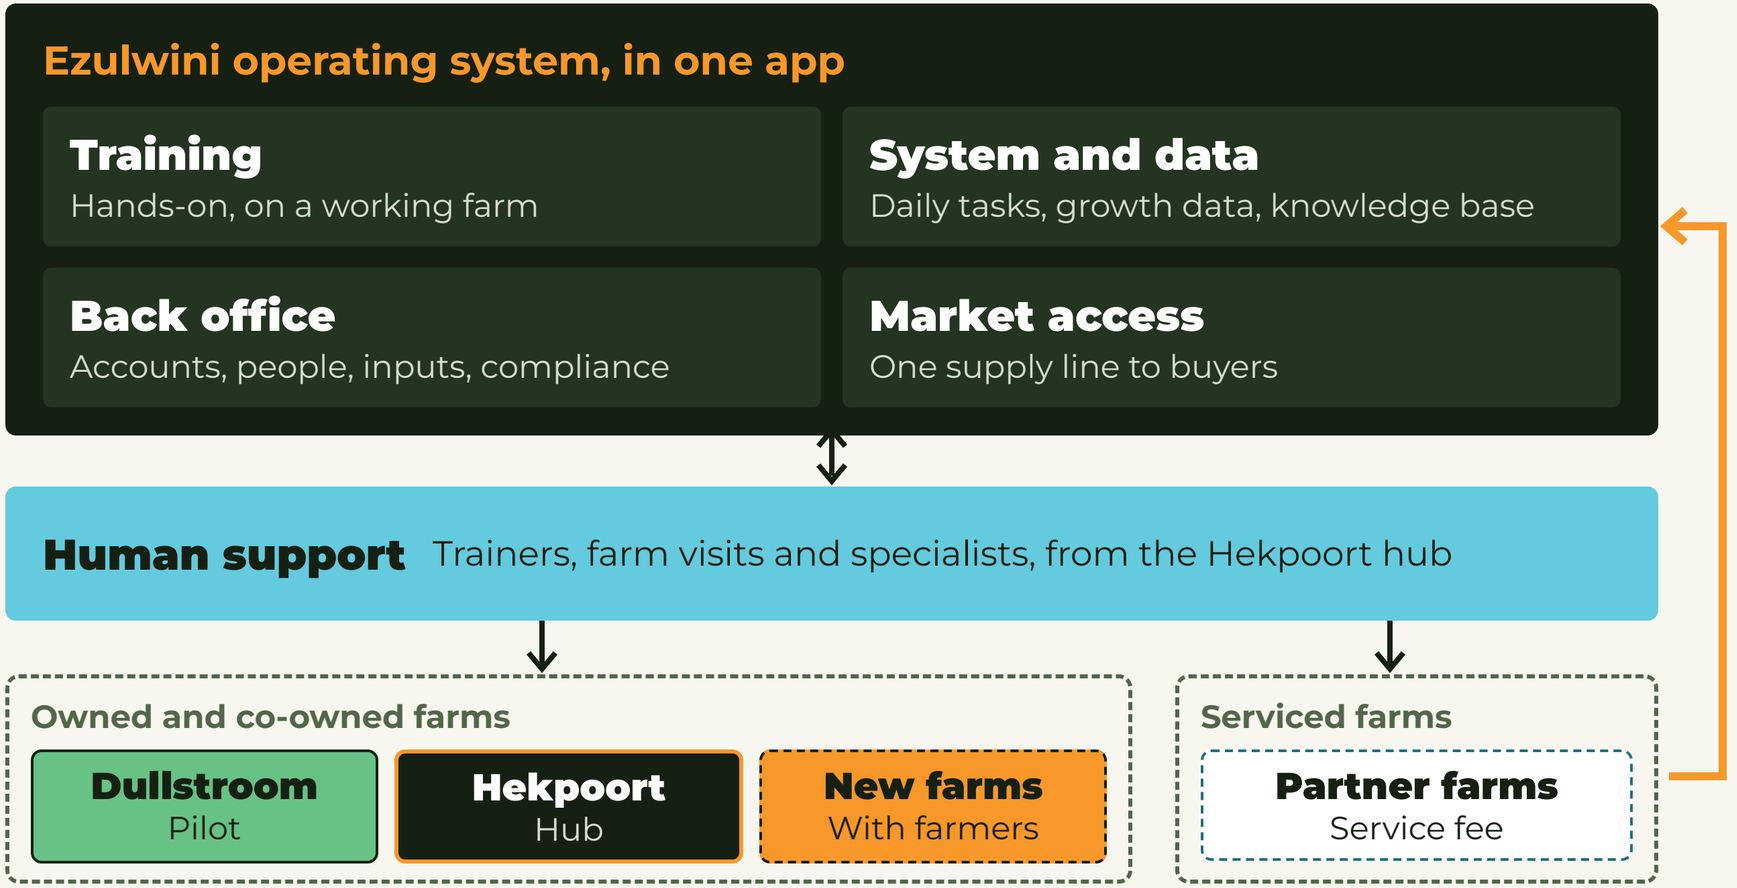

EVERY FARM PAYS BACK

A 6.5% service fee

Its growing data

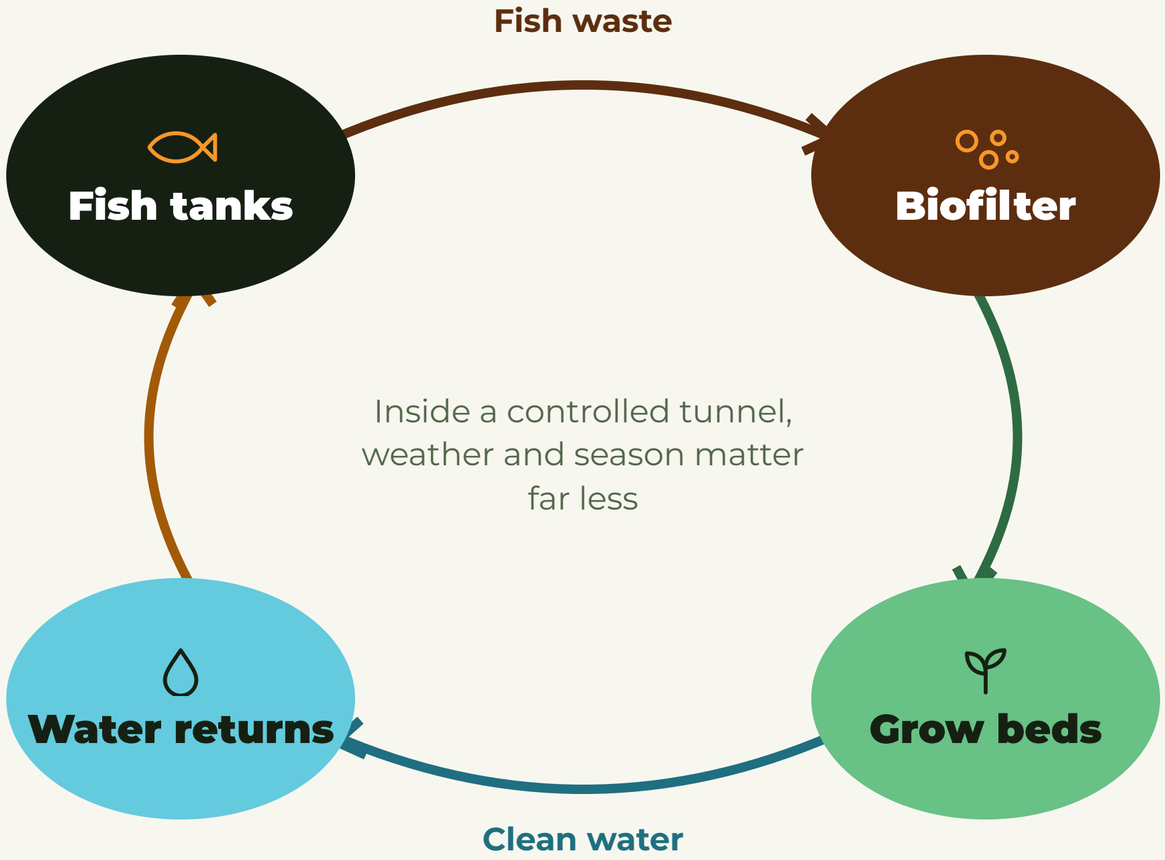

Produce for one supply line

Each farm's data makes the next answer better, for every farm.

THE GROWING METHOD

Controlled environment, circular production

Insular and resilient
Lowest possible reliance on input availability and cost, and resistant to external conditions

Commercially predictable
Constant harvests every week, removing seasonal cash challenges

Land agnostic
Works on marginal land with no need for good soil

Grown near buyers
Fresh food produced close to where it is eaten

Far less water
Water recirculates and is not discharged

PROOF

Dullstroom has traded for four years and is profitable at farm level

R1.44m

Revenue, FY26 (March 2025 to February 2026)

R337k

Farm-level profit, FY26, before head office and finance costs

1,000 sqm

One tunnel, producing every week

6 people

A local team, trained on site

Four years of growth data. The farm app in daily use. Restaurants and specialty retail buying weekly.

Source: Xero, Dullstroom reporting unit, FY26 actuals.

THE REPEATABLE UNIT

One tunnel proved it; four tunnels is the unit we repeat

PROVEN

Dullstroom pilot

1 tunnel, 420 rafts

Revenue per annum

R1.44m

Farm EBITDA per annum

R272k 19%

THE UNIT WE REPEAT

Network farm

4 tunnels, 1,680 rafts. One packhouse, one management team, one build

Revenue per annum

R7.65m

Farm EBITDA per annum, after the 6.5% fee

R2.46m 32%

EACH NEW FARM, TO HEAD OFFICE

R1.2m

Setup margin, once per farm

Design, build oversight, training, the full management system and initial demand planning

R500k

Annually, as the 6.5% service fee

Plus 26 to 40% of the farm's profit, not counted in the forecast

About R15m to build, with contingency. We expect to build under this.

HEKPOORT, THE ANCHOR

New anchor Farm in Gauteng purchased with aquaponic foundations laid. Great value premium on our model.

BACKGROUND

The site of South Africa's former market leader in technical aquaponics: 50 ha at Hekpoort, Gauteng, with 2.5 ha developed.

WHAT WENT WRONG

We studied the business since 2022; it closed by early 2026.
Their model built in complexity and heavier opex and capex than necessary.
The business failed to find market access at reasonable prices.

WHAT WE DO RIGHT

We bucked the trend and built the simplest solution possible, we call it mid-tech. Less capex, less energy, less complexity. Dullstroom proved the model.
Packing and value add based on proper commercial planning lead to wholly different market pricing.

WHY WE BOUGHT IT

50 ha bought at auction, with tunnels, hatchery, packhouse and water licence. A R6.7m refit, against about R15m to build a new four-tunnel farm, gives us our production and training hub.

THE EARNINGS AT 70% OUTPUT, PER ANNUM

R4.3m
EBITDA after fee

R10.5m
Revenue

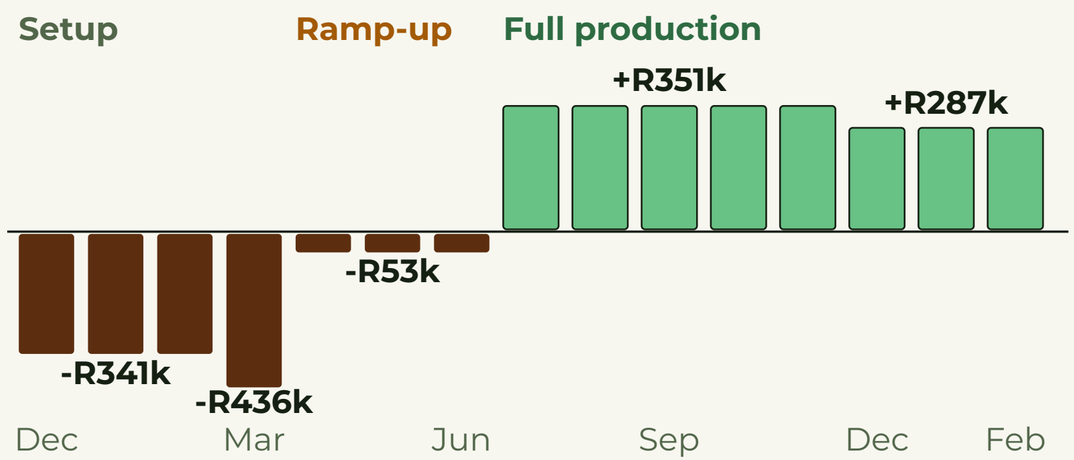

41%
Margin

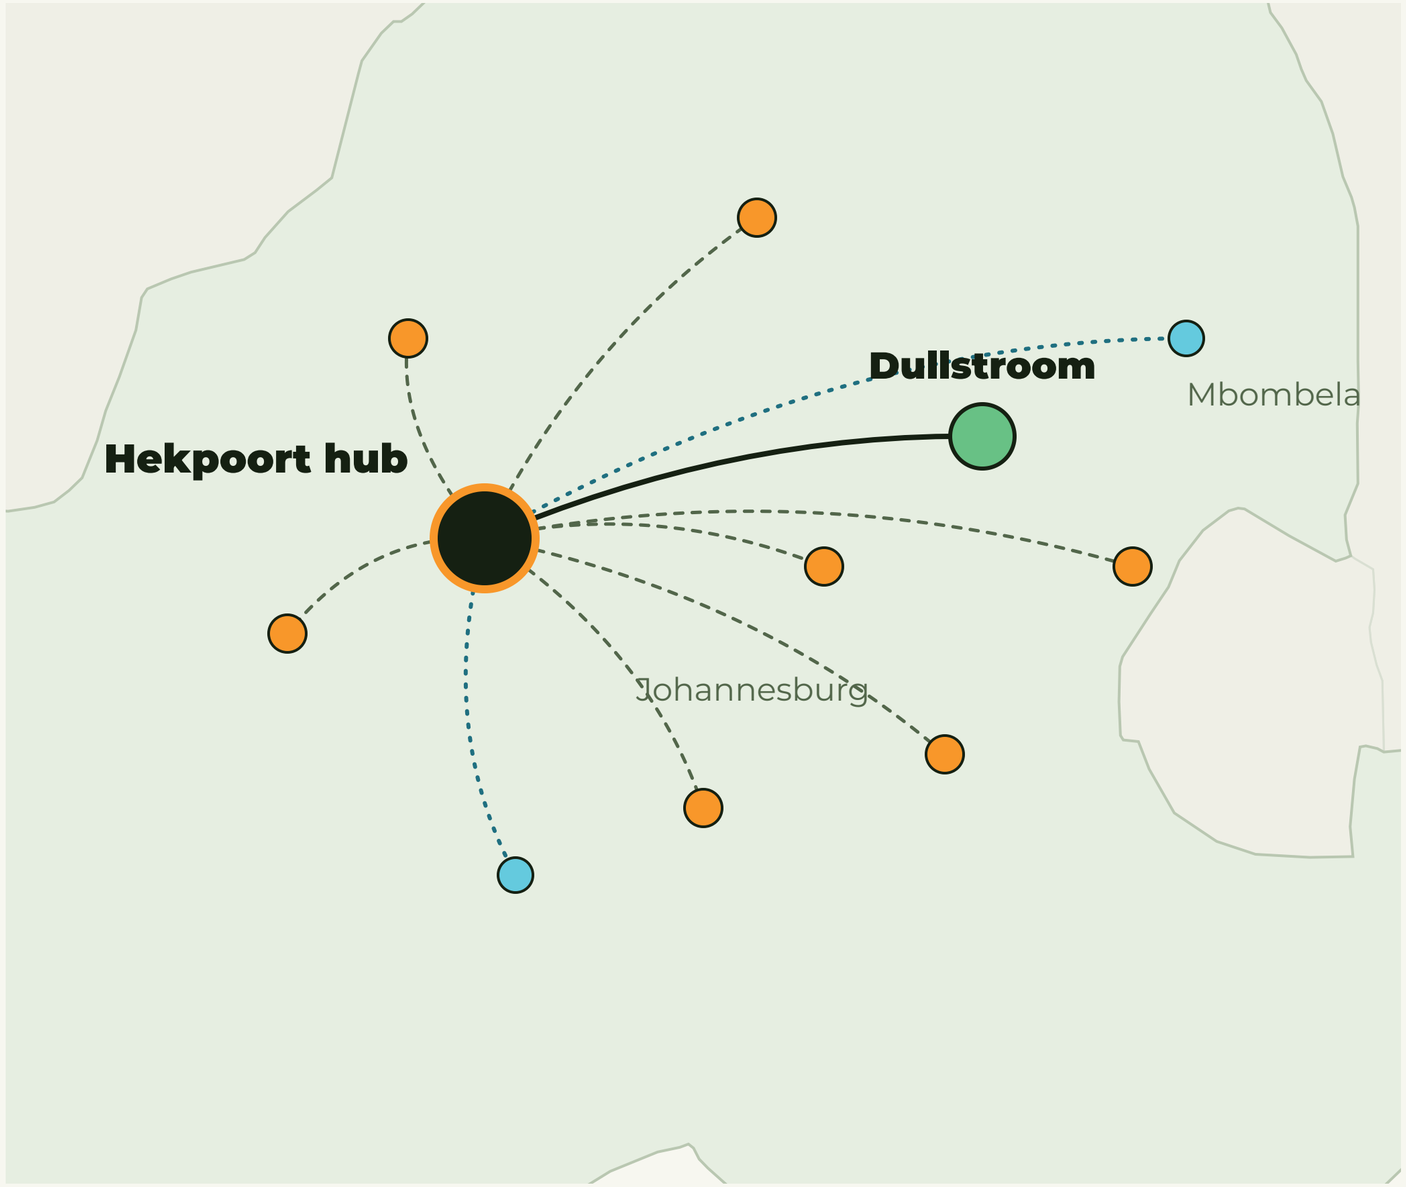

More than one and a half network farms. Full output: R7.6m EBITDA on R14.9m revenue, 51%.

THE CASHFLOW

With head office, cash positive from month 8

Operating cash per month, Hekpoort less head office costs, Dec 2026 to Feb 2028

Hekpoort and Dullstroom at their real locations; other farms illustrative.

THE FARM NETWORK

One operating system across every farm

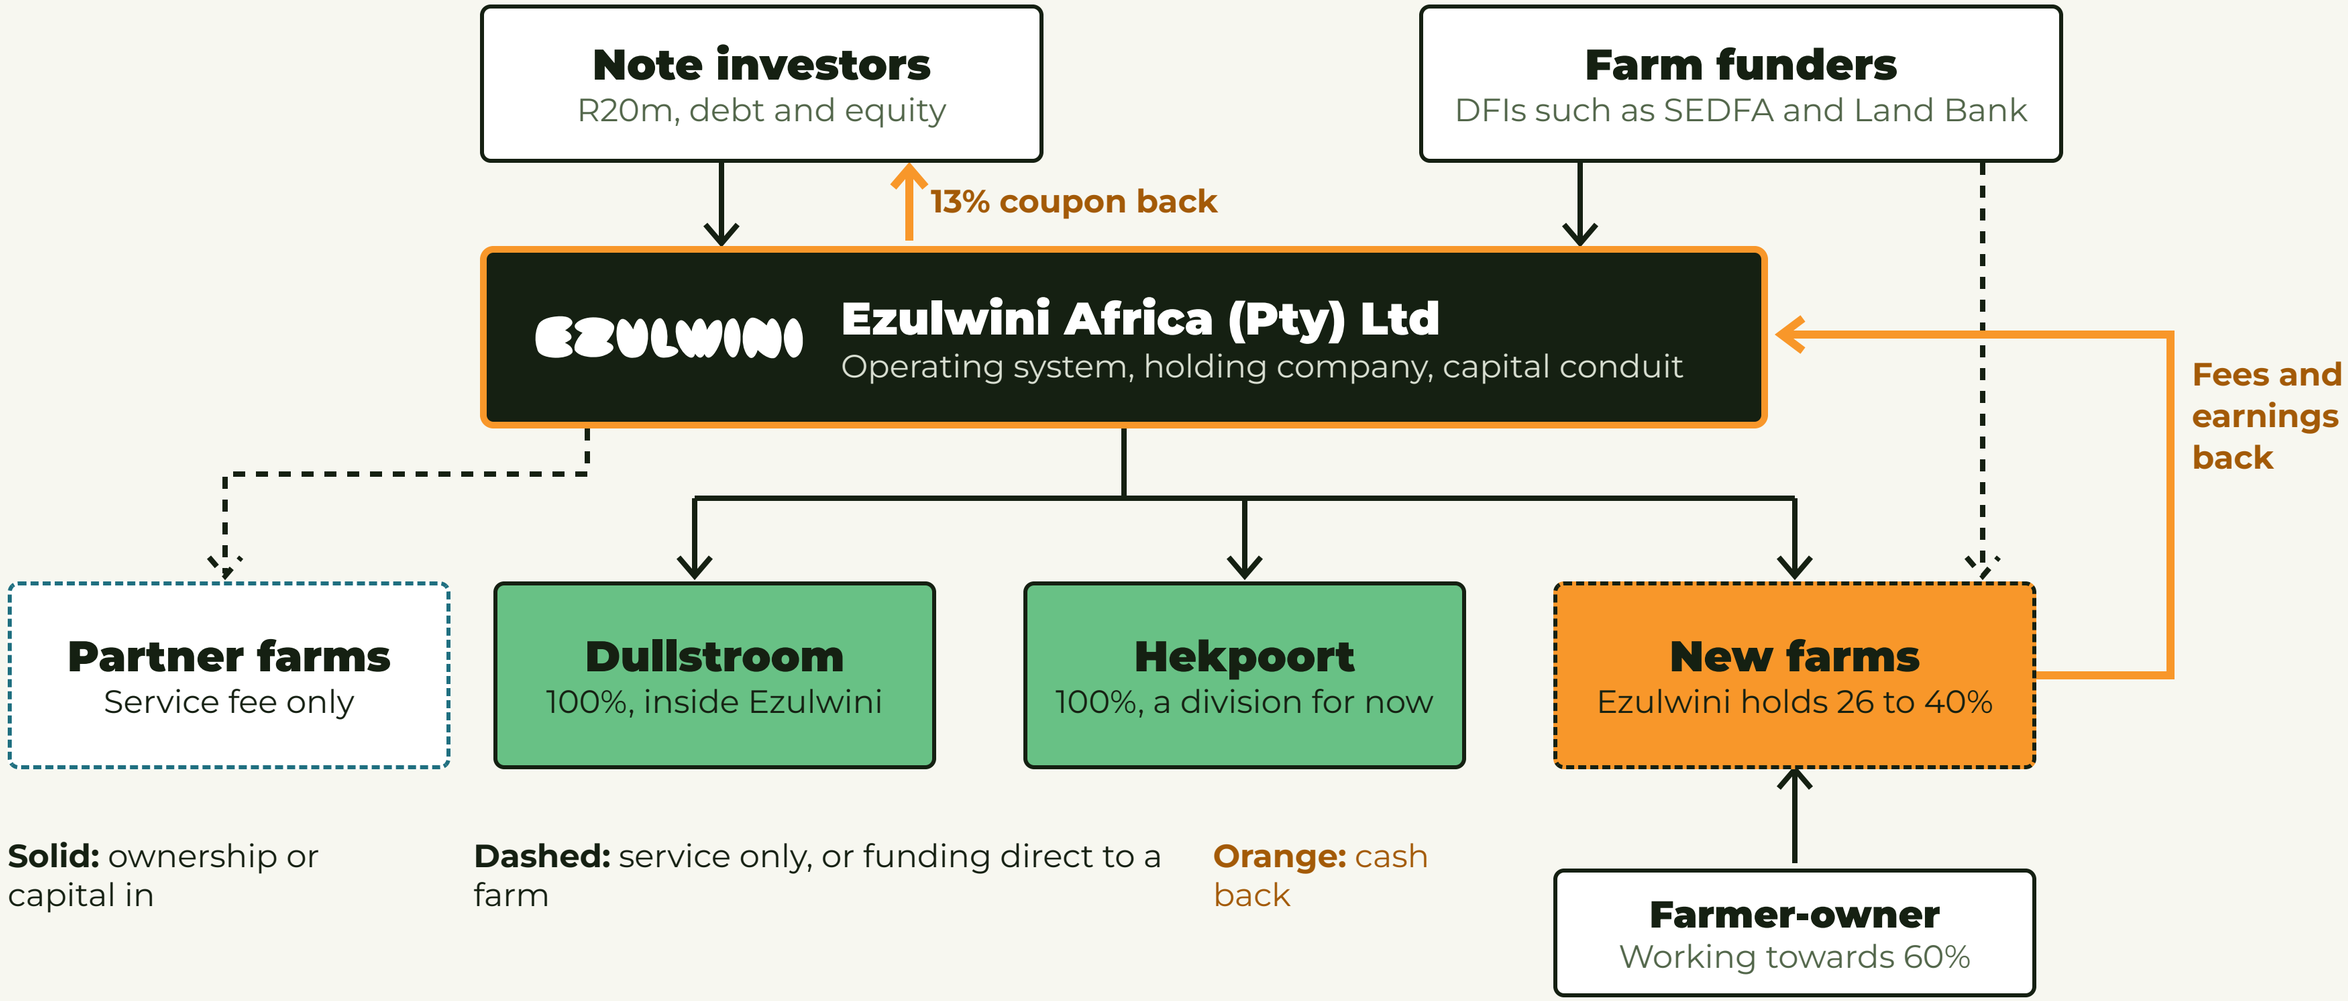

- **Hub:** Hekpoort, wholly owned, home of training
- **Pilot:** Dullstroom, one tunnel trading for four years
- **Network farms:** four tunnels, co-owned, farmer working towards 60%
- **Partner farms:** funded by others, run on our system for a fee

Out to every farm
Training, system and data, back office, market access

Back from every farm
Produce for one supply line, and growing data

OWNERSHIP AND CAPITAL

Ezulwini is the holding company and the conduit for farm capital

REVENUE STREAMS

Head office earns from every farm in the network

6.5%	**Service fee** Of every network farm's sales, for the operating system. About R0.5m per farm, annually.
R1.2m	**Setup margin** Earned once on each new farm head office designs, builds and launches.
100%	**Hekpoort earnings** Wholly owned: R4.3m EBITDA per annum at 70% output, R7.6m at full.
26 to 40%	**Equity distributions** Head office's share of each co-owned farm's profit. Not counted in the forecast.

BY FEBRUARY 2031 9 network farms pay R4.5m in service fees, 6 new builds earn R7.2m in setup margin, and Hekpoort and Dullstroom keep trading.

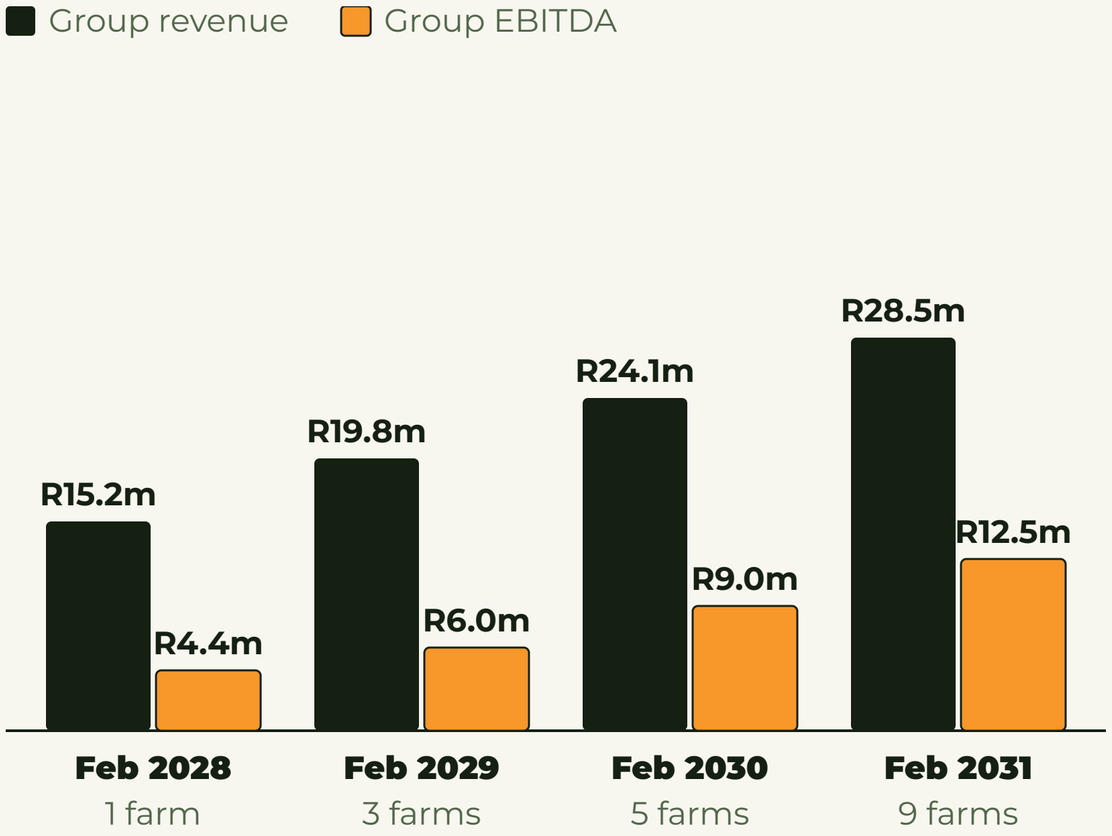

Source: Ezulwini Investor Financials v1.1, base case. Partner farm fees not shown.

Hekpoort in its first iteration

FIVE-YEAR VIEW

Group EBITDA grows from R4.4m to R12.5m as the network builds

Coupon cover, group EBITDA over coupons

Year to February	2028	2029	2030	2031
Base case	1.9x	2.3x	3.5x	5.4x
Hekpoort at 70%	1.1x	1.2x	2.1x	3.8x
No new farms	0.9x	1.4x	1.6x	2.3x
Cash built up	R3.5m	R6.4m	R11.1m	R18.5m

Year-one coupons for each close are held in reserve, so operations pay only R0.28m of coupons to February 2028.

The three months to February 2027 are setup: R0.4m revenue, a R1.0m loss paid from the runway.

USE OF FUNDS

What the R20m pays for

Use	Amount
Build: Hekpoort refit, both phases	R6.70m
Run: runway to breakeven	R2.05m
Systems and curriculum	R1.25m
Sales: team, Dullstroom upgrades	R0.85m
Balance sheet: Absa, existing investors	R5.58m
Reserve: first year of coupons	R2.57m
Costs: GAP processing, transaction, rounding	R1.00m
Total	**R20.0m**

Full budget confirmed and available on request.
Each close holds its first year of coupons in reserve. Mid and full close dates are planning assumptions.

WHAT EACH CLOSE ACHIEVES

1 **FIRST CLOSE · R8.75m · 30 NOV 2026**

Hekpoort becomes a fully tested, cash-positive unit, and head office has a tested service it can sell and implement.

2 **MID CLOSE · R5.25m · 31 MAR 2027**

Dullstroom and Hekpoort together earn enough to run the whole business cash positive, with a full curriculum ready to build the farmer pipeline.

3 **FULL CLOSE · R6.0m · 30 JUN 2027**

Hekpoort is free of bank debt and anchors the first network farms financially. Two builds start in the year to February 2028.

THE RAISE

Raising R20m, blended debt and equity

1 **We can service the debt**
Hekpoort, head office and setup margins on new farms carry the coupons from the second year. Each close holds its first year in reserve.

2 **We have room for equity partners**
If half the round converts at the R50m cap, partners hold about 20% of Ezulwini.

3 **A lead investor can shape the terms**
We welcome a partner who wants to take a large part of the round and set its final terms.

Repayment: R18.5m of cash built by February 2031 against R20m of principal. Any gap is met by conversion, the two-year extension or refinancing against Hekpoort.

INDICATIVE STRUCTURE

Instrument
Convertible note in Ezulwini Africa (Pty) Ltd

Coupon
13% per annum, fixed, paid in cash

Term
4 years, company option to extend by 2

Equity option
Convert up to half at a R50m post-money cap

Closes
Three, from 30 November 2026

Indicative, subject to the final note agreement. Private placement under s96(1)(b) of the Companies Act.

THE TEAM

A builder, a backer, a commercial lead and a farm team

Lliam Roach, CEO in
Founder and builder. Engineering background; designed and built Dullstroom

Mitch Marescia in
Director and backer. Enterprise development in rural communities

Matt Beckett in
Commercial and strategic direction, finance and structure. Leads N+1

N+1 Impact Venture Partners · np1.co.za
Seed investor that has backed Ezulwini's growth and runway. Partnered on commercial planning and systems; will provide and co-build the back office.

THE ROUTE INTO OWNERSHIP

Steven Phoku

Started as a day labourer on the first earthworks. Now manages the Dullstroom farm.

Next: a shareholder, and a head office role training the farmers who follow him.

EZULWINI

Siyaphambili

We are moving forward.

We are raising R20m to anchor the network. First close is 30 November 2026.
