N+1 PRESENTS

IMPACT VENTURE PARTNERS

PORTFOLIO VENTURE · RAISE NOW OPEN

Ezulwini

13 November 2026

Commercial farms with local ownership. An operating system that makes a first-generation farmer's farm stable, and investable, from day one.

RAISING, IN THREE CLOSES

R8.75m → R14m → R20m

To refit Hekpoort, the farm Ezulwini already owns, finish its operating system and clear its bank debt. Hekpoort then carries head office and anchors a network of co-owned farms.

4 years
trading at the Dullstroom pilot, profitable at farm level

R4.3m
Hekpoort EBITDA per annum at 70% of modelled output

9
network farms by February 2031, 51 by 2036 at the planned pace

60%
farmer ownership target on each network farm

Why Ezulwini exists

Commercial farming in South Africa is still owned by very few. Black farmers hold an estimated 5 to 10% of commercial production, and new entrants fail on four things at once: capital, buyers, systems and seasonal income.

Lliam Roach built Ezulwini to solve all four together. The first farm, in Dullstroom, has traded for four years and made R337k farm-level profit in FY26, run by a local team trained on site.

The farm team in the grow tunnel, Dullstroom.

Why we backed it

Ezulwini is the kind of real-economy business N+1 exists to build with first-generation founders: a working farm, a team that grew from local hires into farm managers, and a system that can be repeated. Steven Phoku started as a day labourer on the first earthworks, now runs Dullstroom, and is next in line to become a shareholder and train the farmers who follow him.

N+1 is an early investor and has partnered with Ezulwini on commercial planning, the financial model and systems development.

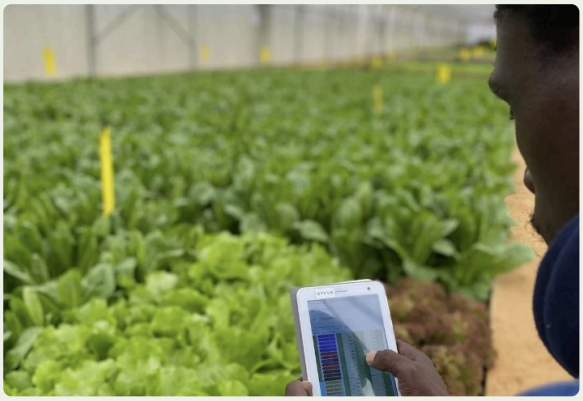

What the raise builds

Anchor	Hekpoort, a 50 ha farm in Gauteng, refitted and cash positive with head office from July 2027

Unit	A four-tunnel network farm earns R2.46m EBITDA per annum and pays head office a R1.2m setup margin once and a 6.5% fee annually
Path	Group EBITDA grows from R4.4m in the year to February 2028 to R12.5m by February 2031 as the network builds
Structure	Blended debt and equity: a convertible note at 13% per annum, convertible up to half at a R50m post-money cap

N+1's role from here

N+1 is a long-term partner. With this round N+1 takes a key role in providing and co-building Ezulwini's back office: accounts, people, growth and technology, delivered through the N+1 Venture Engine, alongside continued commercial and financial leadership.

Recording growth data in the farm app, Dullstroom.
